

MIGUEL CASTILLO

London, United Kingdom | (+44) 07350225486 | micky.abreu@gmail.com

EDUCATION

MSc Advanced Computing | King's College London, UK | Expected Graduation: September 2026

Relevant Coursework: Multi-Agent Systems, Security Engineering, Software Testing, Deep Learning, Big Data Technologies, Distributed Ledgers, Network Security, Intelligent Systems, Software Engineering

Industrial Engineering BSc | Universidad de Concepción, Chile | 2015–2021 | *Maximum Distinction*

Thesis: A heuristic method to solve the Google Machine Reassignment Problem.

PROGRAMMING LANGUAGES: Java, Python, SQL, Typescript

TECHNICAL SKILLS: Distributed Systems, Security, Testing, API, Database, Design, Architecture, Networking, Cloud Computing, Big Data, AI, Incident Response, Debugging, Scalability, Development

TECHNOLOGIES: Linux, AWS, GCP, Terraform, Docker, Git, Airflow, Spark, Django, Spring, Snowflake

WORK EXPERIENCE

Data Engineer II, Front, Remote (03/2025–10/2025)

- Reduced computing costs by 95% by implementing an event-driven architecture leveraged by streaming infrastructure that replaced the legacy standard writes architecture. (AWS, Snowpipe)
- Achieved a 30% storage cost reduction by building an automated garbage table detection system to identify and delete untracked data analytics models safely. (DBT, Airflow, Automation)

Data Engineer II, PagerDuty, Chile (04/2023–03/2025)

- Built a Digital Ads Performance attribution model enabling precise revenue tracking across marketing channels, identifying \$1.5M in annual ad spend optimization opportunities (SQL, Snowflake, Airflow, Python)
- Secured FedRAMP moderate authorization by migrating 80TB of enterprise data to compliant cloud regions (AWS, Terraform, Snowflake, Databricks, Airflow)
- Drove \$650K revenue increase by developing the Pipeline Health data system, unifying in-house product data with opportunity data from Salesforce and other business-related software such as Zuora and Marketo. (Terraform, AWS, Airflow, Snowflake, Salesforce API)
- Reduced account planning time by 95% for enterprise customers by building a GenAI pipeline that automatically generates MEDDIC framework analysis using RAG, prompt engineering, and fine-tuning (Snowflake, Airflow, Python, LLMs)

Lead Backend Engineer, Datawheel, Chile (10/2020–03/2023)

- Drove \$30K revenue growth for OEC.world platform by building premium features, including bulk data export API and economic complexity indicators calculator (Python, FastAPI, GCP, Clickhouse, React, Web Development)
- Enabled \$25k revenue increase by architecting and deploying DataMexico public data API, using an OLAP data architecture that powered custom data aggregations and retrievals (Python, SQL, GCP)

Software Engineer Intern, Graymatics, Singapore (11/2019–09/2020)

- Delivered an IoT computer vision solution collaborating with the AWS prototyping team, enhancing edge device data processing and cloud integration to enable distributed deployments with centralized data analytics (Grafana, SQL, Kinesis, Typescript, Docker, Web Development)

ADDITIONAL INFORMATION

LANGUAGES: English (Fluent), Spanish (Native)

EXTRACURRICULAR: Yoga, Football, Surf
